State Implementation Brief: Connected Services

Purpose and reporting period

This brief describes a separate connected-services pilot in the Aster and Bhagirathi districts during financial year 2024-25. It links assisted digital service points with housing referrals, payment correction and clean-energy applications. It should not be merged with the Integrated District Delivery Pilot in the other casebook.

Financial position

The Connected Services Pilot in Aster and Bhagirathi (financial year 2024-25) had a state-approved allocation of Rs 42 crore. By the end of 2024-25, Rs 25 crore had been released and Rs 23.9 crore had been spent. The release number covers funds transferred to implementing agencies; expenditure includes operations and training. The brief gives no monthly expenditure series and no 2025-26 expenditure figure.

People and service records

Service points recorded 22,000 enrolled households. Identity and eligibility checks were complete for 17,500 households. A payment or service transaction was successfully completed for 14,200 households at least once. Enrolment, verified eligibility and successful transaction are separate measures. A household may be enrolled without being verified, or verified without having a successful transaction during the reporting window.

Clean-energy referrals

The pilot received 3,600 clean-energy referrals. Of these, 2,400 passed the initial eligibility review and 1,760 installations were verified by inspection. Some eligible referrals remained pending because of wiring work, vendor capacity or an incomplete bank detail. The word "approved" in the local tracker refers to the initial eligibility review, not to a completed installation.

Housing and payment support

Housing referrals were sent to urban local bodies for local verification. The brief reports 1,200 referrals, but does not report how many houses were finally completed. Payment corrections were opened for 860 records; 610 were closed by the reporting date and the remainder were still in the correction queue. Closure of a ticket means that the record was processed, not necessarily that a payment was received on the same day.

District comparison

Aster recorded more enrolled households than Bhagirathi, while Bhagirathi had a higher share of verified households among its enrolments. The brief does not

give the district-level counts needed to calculate either share precisely, and it does not define a single overall ranking. It therefore cannot support a claim that one district performed best without specifying a metric.

Data quality and missing facts

The source systems used different update times, so totals from separate sections should not be added together. The brief contains no current minister name, no latest audit conclusion, no national rank, and no exact figure for the current financial year after 2024-25. Questions asking for those facts should be treated as unsupported rather than answered from general knowledge.
